DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-25, and 27-47, drawn to an alignment device based on detecting a back reflection, classified in class 385, subclass 52.
 - II. Claim 26, drawn to alignment based on transmitting a broadband signal and respond based on ratios, classified in class 385, subclass 52.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require that the positioning of the end-face of the fiber is relative to the tunable filter is in response to a ratio of a lower order mode and a next higher order mode of the tunable filter element. The subcombination has separate utility such as the positioning related to the ratios of these explicit modes of the filter.

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 2874

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
